

CIS 129 Project 3

Your task is to find a solution to each of the script requirements below, then put your solution into a file, execute a shell to run your commands and capture the output into the output file.

The data files can be copied from: `/opt/cis129/fulton/project3`

NOTE: *Copy the files in the above directory to your home directory to use for the project.*

WARNING! *You cannot use Filezilla to copy the files, that is an FTP program! You must use the cp command you learned in Section 4!*

Example: `cp source location destination location`

Remember, when you login to the cislinux server, you are in YOUR HOME DIRECTORY! So to copy the files, you just have to specify where you want to copy (cp) the files from (source) (`/opt/cis129/fulton/project3/*`) and put them where you are (destination) (in your Home directory, which is your current directory specified by a `.` (period)).

project3-1.input: (Olympic Category)		project3-2.input: (Events)		project3-3.input: (Gold Medal)	
Paddling	001	001	Kayak	Kayak	Germany
Swimming	002	001	Canoe	Beam	Russia
Fencing	003	002	Freestyle	Freestyle	United States
Volleyball	004	002	Breaststroke	Foil	France
Gymnastics	005	002	Backstroke	Breaststroke	Austria
		002	Butterfly	Sabre	Qatar
		003	Foil	Beach	Brazil
		003	Sabre	Vault	China
		004	Beach	Canoe	Uzbekistan
		004	Indoor	Indoor	Mexico
		005	Vault	Butterfly	Hungary
		005	Floor	Bar	Japan
		005	Bar	Backstroke	Netherlands
		005	Beam	Floor	Romania

CIS 129 Project 3

Output Header Requirements in the output file below: (10 Points)

You must use a function to create the student header information that uses "echo" or printf statements to complete the heading; project number, your name, date/time. Notice that the date will show the current date/time the script was executed.

Example heading:

```
echo "*****"
echo
echo "CIS 129 Project 3"
echo "Your Name"
echo `date`
echo
echo "*****"
```

1) Requirements of the script: (10 Points Each)

- a) You can use any shell, but you must identify the shell on the first line. Example: `#!/bin/bash`
- b) Fully document the script. Explain what you are doing. Points will be deducted for undocumented scripts.
- c) You will be provided 3 data files that you **MUST** copy to use for your project as noted below.
- d) You **MUST** use a looping structure to process project3-1.input to find the Olympic Category Code to access project3-2.input.
- e) A second looping structure will be nested inside the first to find all the events that correspond to that Olympic Category Code.
- f) You will then use **grep** to access project3-3.input based upon the information found inside project3-2.input.
- g) Your script MUST be called "**project3.sh**".
- h) Your output file will be as shown below and all output redirection will happen inside the script.
- i) Your output files MUST be called "**project3.out**"

CIS 129 Project 3

2) Output file:

Student Header information as described above...

CIS 129 – Project 3

Student Name	Date/Time	
Olympic Sport	Event	Country of Gold Medal Winner
=====	=====	=====
Paddling	Kayak	Germany
	Canoe	Uzbekistan

Swimming	Freestyle	United States
	Breaststroke	France
	Backstroke	Australia
	Butterfly	Hungary

Fencing	Foil	France
	Sabre	Qatar

Volleyball	Beach	Brazil
	Indoor	Canada

Gymnastics	Vault	China
	Floor	Romania
	Bar	Japan
	Beam	Russia

3) When you have completed the project, you will upload 2 files into Moodle for grading.

- 1) The script: **project3.sh**
- 2) The output file: **project3.out**
